All intervals and the related man-hour times are based on normal operations. The man-hour time specified is the time you need to do all the services prescribed for a particular interval.

Hard time intervals may be shortened if your lubricants are contaminated or if you are operating the equipment under adverse conditions, including longer-than-usual operating hours. Hard time intervals may be extended during periods of low activity, though adequate preservation precautions must be taken.

**WARNING**

Drycleaning fluid is flammable and will not be used near an open flame. A fire extinguisher will be kept nearby when the solvent is used. Use only in well-ventilated places. Failure to do this may result in injury to personnel and/or damage to equipment.

Clean fittings before lubricating. Clean parts with drycleaning solvent SD-II (S-753) meeting specification P-D-680. Dry before lubricating. Dotted arrow points indicate lubrication on both sides of equipment. A dotted circle indicates a drain below. Relubricate all items found contaminated after fording.

The lowest level of maintenance authorized to lubricate a point is indicated by one of the following symbols as appropriate: Operator/Crew (C); and Organizational Maintenance (O).

Reporting errors and recommending improvements. (Army) You can help us improve this manual. If you find any mistakes, or if you know of a way to improve the procedures, please let us know. Mail your letter or DA Form 2028 (Recommended Changes to Publications and Blank Forms) directly to: Commander, U.S. Army Tank-Automotive Command, ATTN: AMSTA-MB, Warren, MI 48397-5000. A reply will be furnished to you. (Marine Corps) Submit NAVMC Form 10772 to the Commanding General, Marine Corps Logistic Base (Code 850), Albany, GA 31704-5000.
NOTE
A REFERENCE TO THE LOCALIZED VIEW (LV) IS PROVIDED AFTER LUBRICATION POINT ENTRY.

</table>

* OE/HDO 15/50 (Grade 15W-40) lubricant may be used when expected temperatures are above +5°F (-15°C).
** If OEA lubricant is required to meet the temperature ranges prescribed in the KEY, then the OEA lubricant is to be used in place of OE/HDO 10 lubricant for all temperature ranges.
*** If operating conditions are severe or abnormal, service chassis lubrication points at 1,000 miles (1,600 kilometers).

### Fuel Requirements — Temperature Limits (VV-F-800)

- **Grade DF2 Fuel** For use above +10°F (-12°C)*
- **Grade DF-1** For use below +10°F (-12°C) to above -20°F (-29°C)
- **Grade DF-A** For use below -20°F (-29°C)

* Temperature limits may vary dependent on the cloud point of the actual DF-2 fuel being supplied in the geographical area.
** DF-1 is not normally procured in CONUS or OCONUS. Refineries will blend DF-2 with kerosene to meet temperature requirements of DF-1.

***The time specified is the time required to perform all services at the particular interval.

**Note**

The man-hours shown above have been established on an individual vehicle basis and, accordingly, are not applicable at maintenance facilities where production line methods are employed.
1. Intervals. This LO complies with DA programming to extend intervals and conserve lubricants. When practicable, lubrication services will be made to coincide with the vehicle's Semiannual ("S") Preventive Maintenance Service. For this purpose, a 10% tolerance (variation) in specified lubrication point mileage is permissible. Those vehicles not accumulating 1,000 mi (1,600 km) in a 6-month period will be lubricated at the time of "S" Preventive Maintenance Service.

2. Army Oil Analysis Program (AOAP). AOAP does not apply to M998 series vehicles.

3. For Operation of Equipment in Protracted Cold Temperatures Below 5°F (-26°C). Remove lubricants prescribed in key for temperatures above -15°F (-26°C). Relubricate with lubricants specified in key for temperatures below -15°F (-26°C). If OEA lubricant is required to meet the temperature ranges prescribed in the key, OEA lubricant is to be used in place of OE/HDO 10 lubricant for all temperature ranges where OE/HDO 10 is specified in the key.

   
   **CAUTION**
   
   - There are two marks on the dipstick, “FULL” and “ADD 1 QT.” The quantity of oil required to raise the oil level from “ADD 1 QT” mark to “FULL” mark is 1 qt (0.9 l). Do not overfill crankcase. Overfilling will result in damage to engine.

   - If water or metal particles are detected during crankcase draining, notify Direct Support Maintenance personnel before refilling crankcase.

   **NOTE**
   
   - If oil level is above “FULL”, it may be due to oil cooler drain back. Operate the engine for one minute, shut down, wait one minute, and recheck oil level.

   - Replace oil filter each time crankcase is drained. Fill crankcase with 8 qt (7.6 l) of engine oil. Crankcase capacity is 7 qt (6.6 l) and oil filter capacity is 1 qt (0.9 l).

   - Oil is added to crankcase through fill tube which is located on top-of engine.

   Check crankcase oil level daily. Start engine and visually check for oil leaks at drain plug and oil filter. Stop engine and allow approximately one minute for oil to drain back into oil pan; recheck oil level with dipstick. On vehicles equipped for deep water fording, the dipstick has a seal which fits into the opening of the dipstick tube. The dipstick handle must be turned counterclockwise to be released before dipstick is withdrawn. Turn handle clockwise to seat after installing dipstick. Change oil every 3,000 mi (4,800 km) or semiannually, whichever occurs first.

5. Engine Oil Filter.
   
   **CAUTION**
   
   If water or metal particles are detected during oil filter replacement, notify Direct Support Maintenance personnel before refilling crankcase.

   **NOTE**
   
   - Replace oil filter each time crankcase is drained.

   Change oil filter every 3,000 mi (4,800 km) or semiannually, whichever occurs first.

6. Fuel Filter. Replace filter element every 6,000 mi (9,600 km) or annually, whichever occurs first. Replace water separator element if unserviceable.
7. Transmission.

**CAUTION**

- Do not overfill transmission. The fluid level rises as the fluid temperature increases. Therefore, do not check level before the transmission has reached normal operating temperature. The safe operating level is within the crosshatch marks on the dipstick. Overfilling will result in damage to transmission.
- If water or metal particles are detected during transmission draining and filter element replacement, notify Direct Support Maintenance personnel before refilling transmission.
- Use Dexron II for filling transmission. Failure to use Dexron II will cause damage to transmission.

**NOTE**

Replace transmission oil filter each time transmission is drained. Fill transmission with 6 qt (5.7 l) of Dexron II.

Check and fill transmission to proper level weekly. Operate transmission through all operating ranges to fill cavities and fluid passages. With vehicle positioned on level ground, allow engine to idle, shift transmission to neutral, and apply parking brake. Check fluid level on dipstick. It should register within the crosshatch marks under the conditions stated above. On vehicles equipped for deep water fording, the dipstick has a seal which fits into the opening of the dipstick tube. The dipstick handle must be turned counterclockwise to be released before dipstick is withdrawn. Turn dipstick handle clockwise to seat after installing dipstick. Change fluid every 12,000 mi (19,200 km) or biennially, whichever occurs first.

8. Transfer Case.

**CAUTION**

- Use Dexron II for filling transfer case. Failure to use Dexron II will cause damage to transfer case.

**NOTE**

Fill transfer case with 3.5 qt (3.3 l) of Dexron II.

Check transfer case fluid level every 3,000 mi (4,800 km) or semiannually, whichever occurs first. Remove fill plug and gasket. Level should be within 1/2 in. (12.7 mm) of fill plug opening when vehicle is level. Install fill plug and gasket, and tighten to 35 lb-ft (47 N-m). Change fluid every 12,000 mi (19,200 km) or biennially, whichever occurs first.

**NOTE**

- Fill each axle differential with 2 qt (1.9 l) of GO.
- Fill each geared hub with 1 pt (0.5 l) of GO.

Check gear lubricant level every 3,000 mi (4,800 km) or semiannually, whichever occurs first. Geared hub level should be within 1/2 in. (12.7 mm) of fill plug opening, when lubricant is cold or to plug level when hot. Axle differential level should be within 1/4 in. (6.4 mm) of fill plug opening when lubricant is cold or to plug level when hot. Change gear lubricant only when required by maintenance repair action or if contaminated by water or other foreign material.

Every 3,000 mi (4,800 km) or semiannually, whichever occurs first, lubricate using low pressure lubrication gun. If operating conditions are severe or abnormal, service at 1,000 mi (1,600 km).

**CAUTION**

Use Dexron II for filling power steering reservoir. Failure to use Dexron II will cause damage to power steering system.

Check the fluid level in the power steering reservoir monthly and adjust level as necessary. If fluid is hot, level should be between “HOT” and “COLD” marks on the cap indicator. If cool, level should be between “ADD” and “COLD” marks. In either condition, level must be above “ADD” mark. Fluid does not require periodic changing.

CAUTION
Use MIL-B-46176, Silicone Brake Fluid (BFS), for filling brake master cylinder. Failure to use BFS will cause damage to brake system.

Check level monthly. Fill to approximately 1/8 in. (3.3 mm) from top of master cylinder reservoirs. Use BFS for brake master cylinder. Fluid does not require periodic changing.

13. Pintle.
Every 3,000 mi (4,800 km) or semiannually, whichever occurs first, lubricate pintle at rear plate fitting. Every 6,000 mi (9,600 km) or annually, whichever occurs first, remove hook and latch pivot bolts and inspect for serviceability. Clean with wire brush and lubricate with seasonal grade OE/HDO.

WARNING
Wear leather gloves when handling winch wire rope. Do not handle wire rope with bare hands. Broken wires cause injury.

After each use, clean and lubricate winch wire rope. Clean entire winch wire rope with wire brush. If used frequently, lubricate with clean OE/HDO 30. If used infrequently, or in very damp or salty conditions, lubricate with CW-II. Do not lubricate winch wire rope in dry, dusty conditions. If used in arctic conditions, lubricate with GO 75. Perform winch wire rope cleaning and lubrication every 3,000 mi (4,800 km) or semiannually, whichever occurs first, when wire rope is not used.

By Order of the Secretary of the Army:

Official:
WILLIAM J. MEEHAN II
Brigadier General, United States Army
The Adjutant General

By Order of the Secretary of the Air Force:

CHARLES C. MCDONALD
General, United States Air Force
Commander, Air Force Logistics Command

By Order of the Marine Corps:

Distribution:
To be distributed in accordance with DA Form 12-38-E, Operator maintenance requirements for LO 9-2320-280-12.
